

Cleaning Instructions for Hopkins® Professional Medical Bags:

Hopkins® brand professional medical bags can be easily cleaned and disinfected with Sanizide, Cavicide or PDI products. Surface disinfectant spray or wipes will suffice. There are also all natural non-toxic [bed bug sprays](#) that can be used to kill and deter bed bugs, fleas and other insects. It is NOT recommended to use bleach as that could degrade the material or coloration of the bag.

[Re-usable Antimicrobial](#) and [disposable](#) bag barriers are recommended for creating a clean surface to place the bag while in a potentially infected area.
